ISS QUALITY BROUGHT NASA IN...

THE PRICE SOLD THEM

NASA's Weather Development Group needed to distribute vital weather information throughout their complex at the Kennedy Space Center. NASA turned to ISS to provide reliable modulators with a superior performance record.

ISS offers a complete line of high quality head end equipment. The ISS GL-5000 Commercial Satellite Receiver has more features than units costing twice the price. The ISS GL-2500 Adjacent Channel Modulator provides separate audio/video IF loop thru for use with all scrambling systems. The ISS GL-2600 Frequency Agile Modulator gives you the versatility of selecting your own modulator frequency output for a fixed channel price. The ISS GL-1600 Active Combiner gives you 16 inputs and one high level +64 dB output. ISS complements its product line with the GL-55 Distribution Amplifier, the GLS-1500-4 and GLS-1500-2 High Frequency Splitters.
